

<sbml>

model definition A

model

instance 1  
of model definition A

instance 1  
of model definition B

*file.xml*: model  
definition A

The diagram illustrates the structure of an SBML file. A large light-yellow rounded rectangle represents the root element <sbml>. Inside it, at the top, is a white rounded rectangle labeled 'model definition A'. Below this is a large light-blue rounded rectangle labeled 'model'. Inside the 'model' rectangle, there are two yellow rounded rectangles: 'instance 1 of model definition A' and 'instance 1 of model definition B'. An arrow points from the 'model' label to the first instance box. Another arrow points from the second instance box to a separate white document icon at the bottom. The document icon has a folded top-right corner and contains the text 'file.xml: model definition A'.
